COMPUDENTIAL

The entire plant is surrounded by a 3-meter-high reinforced-concrete well. Inside the wall, within the plant compound, guard stations have been established at 100-meter intervals. During the night, a two-man guard detail accompanied by a watchdog patrols the wall area, so that it is impossible for anyons to approach the wall undetected. Furthermore, all entrences to the building and the compound are guarded by employees in civilian clothes. In the various buildings, 30 - 40 AVH men disguised as factory workers patrol constantly.

Access to the factory compound or one of its buildings is possible only with a pass issued by the local AVH commander. There are two types of passes:

(1) The yellow pass, issued to construction workers, which entitles the holder to be in the factory compound from 0700 to 1800 hours. To remain in the compound longer, he must get special permission from the AVH commander.

(2) The blue pass, issued to all factory personnel. However, the holder can enter only the building whose number is denoted on the pass. The blue pass is valid only when accompanied by an assignment card, which indicates the shift on which the holder works. Each month, new stamps are pasted on both passes, to confirm the extension of the assignment and to certify the validity of the pass.

Passes are procured as follows: Anyone who desires admittance to the Mitrogen Works what first see the party secretary of the plant and obtain a letter of recommendation for an entry pass, which he takes to the AVE commander for final approval. If the AVE approves, the applicant receives the pass. Frequently, however, the AVE rejects such requests despite the recommendation of the party secretary.

A similar system is used in the Petroleva Industry Enterprise. In this case, the passes of the factory workers are white and are good for any building; they are valid only when shown with an assignment card. The passes of construction workers are marked with a red stripe.
